

A man in a light-colored shirt and glasses is standing in a server room, looking at a laptop. The room is filled with server racks and has large windows on the left side. The lighting is dim, with some light coming from the windows. The man is holding the laptop with both hands and appears to be working on it. The server racks are dark and have many small lights on them. The overall atmosphere is professional and technical.

Data Centre Cleaning

I.

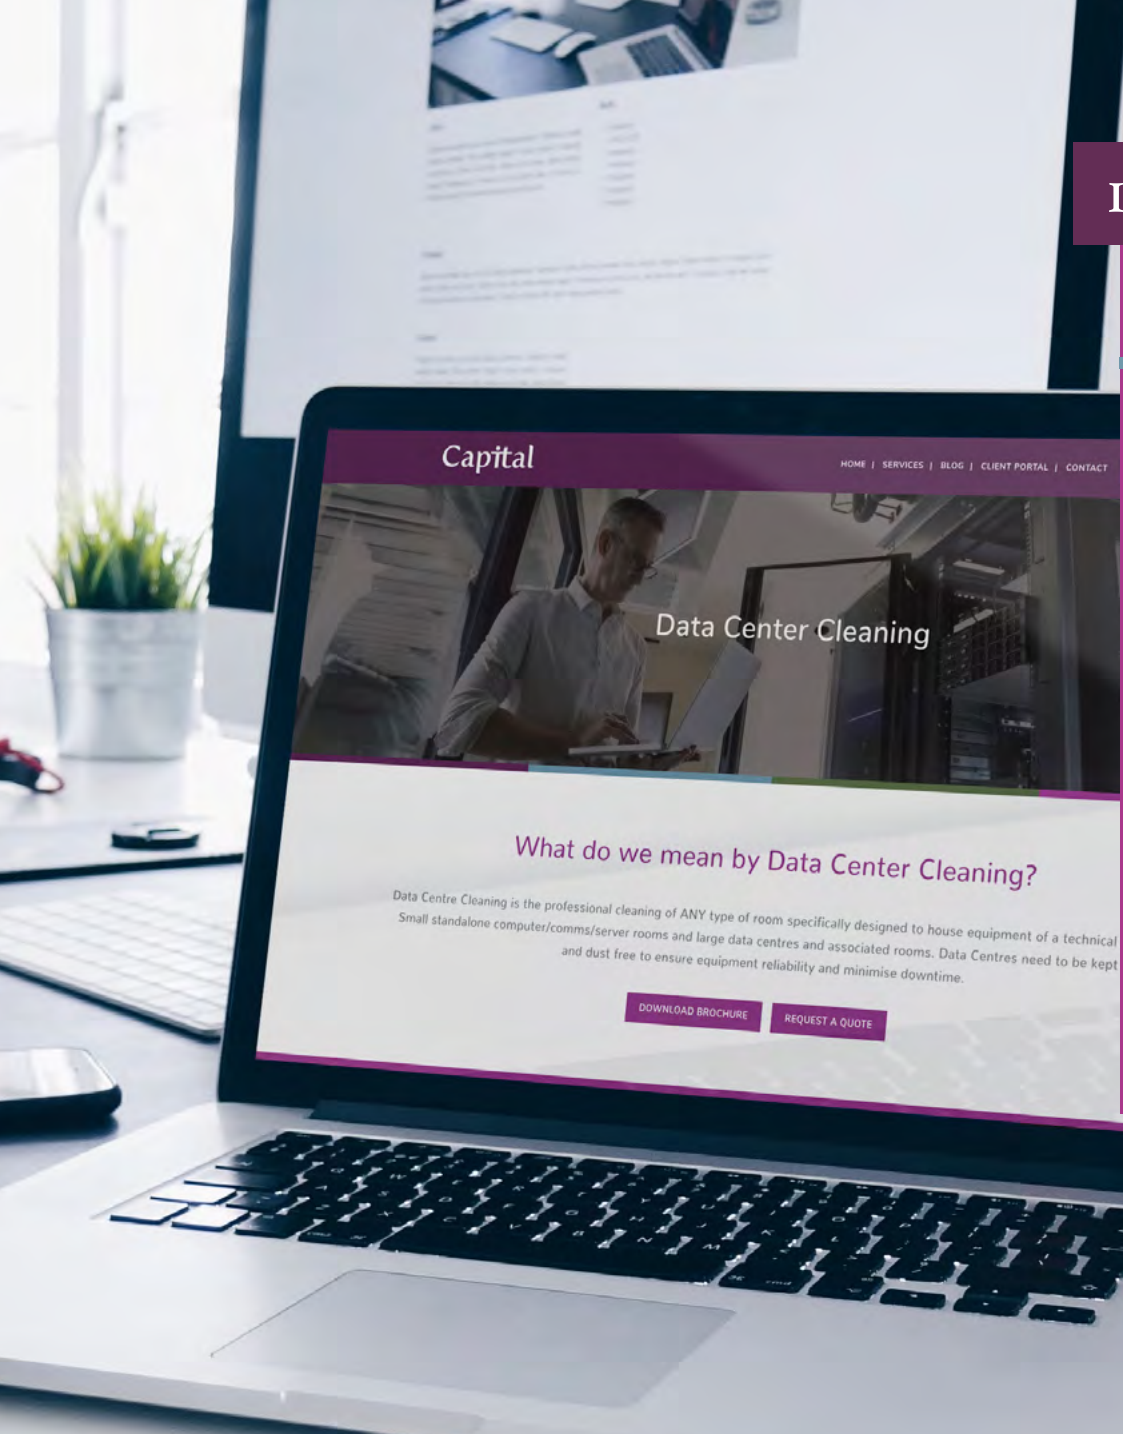

Service Description

Data Centre Cleaning is the professional cleaning of ANY type of room specifically designed to house equipment of a technical nature.

These can be small standalone computer/comms/server rooms but also large data centres and associated rooms.

Data Centres need to be kept clean and dust free to ensure equipment reliability and minimise downtime.

Our services are bespoke, please see basic specification sheet, generic method statement and risk assessment (links) for our scope of work.

Small standalone computer/comms/server rooms but also large data centres and associated rooms.

Service Benefits

- **Protecting your investment**

You invest thousands of pounds in business technology, it therefore makes perfect sense to protect that investment. Prevention of hardware failure protects you against unwanted budget expenditure. We are affordable and offer real value-for-money

- **Minimising costly downtime**

Any disruption in business activity due to equipment failure is extremely expensive, so doing all you can to avoid that disruption must be the right thing to do.

- **Eliminating fire risk**

Floor voids and other areas can become contaminated with dust and debris over time and become a serious potential fire hazard. Therefore regular cleaning and maintenance is essential.

Prevention of hardware failure protects you against unwanted budget expenditure.

- Promoting a positive image.

For some organisations a Data Centre is something to showcase, having a pristine environment with clean, dust free equipment and professionally buffed vinyl floors is a real bonus when showing around potential clients.

All computer manufacturers publish details of the optimum working environment required when housing their equipment.

It is generally agreed that these areas are free from all potential contaminants, are kept at the optimum temperature and have adequate airflow.

Having your Data Centres cleaned and maintained by us also ensures that your staff work in a clean and professional environment that is not only good for morale, but also conveys your professional approach to Data Centre maintenance and management to the outside world.

Having a **pristine environment** is a real bonus when showing around potential clients.

3.

Methods

Where necessary, we will carry out a site survey of your Data Centre and from that construct a service plan and quotation in line with your requirements.

All staff are security cleared, many to SC level and undergo full in-house and on-going training. They are uniformed and carry ID passes.

We utilise a state of the art management and real time, tracking and scheduling system which allows us to deliver services in an efficient and timely manner, keeping customers constantly updated with details of service delivery dates, times and progress. All designed to ensure complete customer satisfaction.
